

WILSON BULK TRANSPORT LTD ENVIRONMENTAL POLICY

This environmental policy is intended to make a statement that Wilson Bulk Transport Ltd is committed to operating in an environmentally sustainable way to protect the environment at our sites, our customer's sites and their surrounding communities.

We will commit to being a leader within the transport industry meeting the needs of today and planning to ensure that we do not adversely impact the environment for future generations. This will be achieved in consultation with our people and our customers. We will lead our environmentally responsible performance by:

- Ensuring that we comply with all relevant and current Legislation, Regulations, and best practice guidelines
- Incorporating environmentally accountable procedures into our day-to-day operations
- Allocating sufficient resources to be sure that the intent of this policy can be met
- Providing a framework for the continuous improvement of our environmental performance
- Setting measureable environmentally friendly and sustainable targets
- Minimising any adverse effects on the environment that result from our operations
- Promoting a strong environmental ethic as part of our team culture
- Ensuring the timely reporting, recording and investigation of all environment related incidents to ensure that all contributing factors are identified and corrective actions are implemented to prevent a recurrence
- Helping to conserve resources to reduce the use of raw materials, energy and packaging and by recycling waste
- Providing information and training and support to our team so that they understand and can carry out their environmental responsibilities
- Supporting local and national strategies and projects that will have significant and positive effects on the environment
- Annually reviewing our environmental performance

Specific to our fleet of vehicles, we will:

- Operate a fuel efficient fleet of vehicles
- Monitor our vehicles' fuel consumption and efficiency
- Maximise vehicle utilisation to eliminate unnecessary travel
- Minimise noise levels by restricting the use of engine and/or exhaust brakes
- Minimise waste and dispose of waste in an economic and environmentally responsible manner
